

## Polyflex Osisko Mine, Rouyn, Quebec

Osisko is a major mining company with extensive activities in the "Abitibi gold belt" in Quebec which represents the single largest gold reserve in production in Canada with proven and probable

reserves in excess of 10.7 million ounces of gold. Polyflex 201 has been used to provide protection to trommel screens that are used in separating various materials.

Typically processing tons of abrasive slurries per day as well as high pressure water, coatings must be impermeable and provide outstanding abrasion protection.

**Owner** Osisko Mine

**Project** Protective coating on magnetic separating equipment

**Contractor** LBG

**Date of project** 2006

**Substrate** Steel

**System:**

**Surface preparation** Sandblast

**Primer** Epoxy (448102)

**Topcoat** Polyflex 201
